1. Introduction

Medical leave processing in educational institutions is a manual and slow process involving physical forms, document submission, and multiple approvals. This project automates that workflow using a centralized web-based system

2. Problem Statement

Students often have to get approval from multiple faculty for medical leaves. Keeping track of document submissions, leave duration, and approvals is tedious and error-prone. There is a need for a system where:

- Students can apply online.
- Faculty can approve/reject in a defined order.
- Leave history is digitally stored and trackable.

3. Objectives

- To build a role-based login system (student, doctor, teacher, HOD, dean).
- To allow students to apply for medical leave with uploaded documents.
- To facilitate leave approval (Doctor → Dean → HOD → Teacher).
- To allow all roles to view leave status and history.

- To maintain a clean, attractive, and responsive UI.

4. Modules Implemented

4.1 Login System

- Each user logs in based on their role.
- Validates credentials using MySQL.

4.2 Student Panel

- Apply for leave with date, reason, and file.
- View status of all requests.

4.3 Doctor Panel

- View pending requests.
- Approve/reject with one click.

4.4 Dean, HOD, Teacher Panels

- View requests only after the previous role has approved.
- Approve/reject accordingly.

4.5 Leave Approval Chain

- Final approval only after all 4 roles approve.
- Status updated to 'approved' automatically.

5. Technologies Used

Component	Description
HTML/CSS	Frontend structure and styling
Bootstrap 5	Responsive design
PHP	Server-side scripting
MySQL	Backend database
XAMPP	Local server (Apache + MySQL)

6. Database Design

6.1 users Table

			6	11	back_pain_certificate_henry.pdf	/uploads/back_pain_certificate_henry.pdf	2025-05-09 20:37:46
			7	12	flu_certificate_olivia.pdf	/uploads/flu_certificate_olivia.pdf	2025-05-09 20:37:46

8. Output & Testing

- Student submits leave request → Shown as "Pending".
- Doctor logs in and approves → Status updates for doctor.
- Dean, HOD, and Teacher follow same steps.
- When all 4 approve, system auto-sets status to "Approved".
- Testing done for all roles using sample data.

9. Conclusion

The system automates multi-level medical leave approvals, reducing paperwork and improving transparency. With a clean interface, role-based access, and automated status tracking, it improves efficiency and student-faculty coordination.

10. Future Enhancements

- OTP or biometric login
- SMS/email notifications on approval
- Admin dashboard to manage users
- Export reports in PDF or Excel
- Leave analytics and charts
